

Foreclosures In the Chicago Region Continue to Grow At An Alarming Rate

Woodstock Institute

March, 2008

Until recently, the foreclosure problem facing the Chicago region has largely been confined to lower-income and minority communities. High concentrations of subprime mortgages, often containing deceptive and abusive terms, in these neighborhoods led to high concentrations of foreclosures. These concentrated foreclosures, in turn, had the potential to lead to neighborhood decline in the form of decreased property values and increased crime. In 2006, growing problems with popular subprime adjustable rate mortgages and stagnant or declining property values led foreclosures in the region to skyrocket to record levels.

In 2007, foreclosure levels increased further. While lower-income and minority communities continued to see the highest concentrations of foreclosures, all parts of the region experienced significant increases from 2006. Suburban regions led the Chicago Six County area in growth of foreclosures, and every part of the Chicago region now has communities with very high levels of foreclosures.

An analysis of regional foreclosure filings in 2007 shows:

- The number of properties with foreclosure filings has grown tremendously since 2005.** The number of properties with foreclosure filings grew to 38,215 in 2007 which was an increase of nearly 32 percent from a previous high of 28,997 in 2006.¹ This is on the heels of a 36 percent increase between 2005 and 2006. Table 1 shows that between 2005 and 2007, the number of properties with foreclosure filings in the region increased by nearly 80 percent.

Table 1. Chicago Six County Area Properties with Foreclosure Filings, 2002 to 2007

	2002	2003	2004	2005	2006	2007	Change	
							2006 to 2007	2005 to 2007
Chicago	9,907	8,188	7,195	7,499	10,268	13,872	35.1%	85.0%
North Cook	499	408	360	378	575	962	67.3%	154.5%
Northwest Cook	1,130	1,019	942	990	1,472	1,971	33.9%	99.1%
West Cook	1,611	1,421	1,282	1,390	1,793	2,545	41.9%	83.1%

Source: Foreclosure Report of Chicago

¹Many properties have multiple foreclosure filings on them due to having more than one mortgage on the property (such as senior and junior lien loans). Only one foreclosure was considered if there were multiple filings on a property in a three-month period. Only foreclosures on single-family residences (1-4 unit buildings and condos) were considered. Additionally, only filings with verifiable addresses were included. Foreclosure data come from the Foreclosure Report of Chicago.

- Suburban communities have seen the largest recent growth in foreclosure filings.** Looking at suburban areas within the Chicago Six County region, Table 1 shows that suburban North Cook County had the largest growth in properties with foreclosure filings with an increase of over 67 percent from 2006 to 2007 and of over 154 percent from 2005 to 2007. Other areas with substantial increases between 2006 and 2007 included Kane County, West Suburban Cook County, and DuPage County, all of which experienced increases greater than 40 percent in the number of properties with foreclosure filings. Between 2005 and 2007, the areas with the greatest increases included DuPage County, Northwest Suburban Cook County, and Kane County which all had the number of properties with foreclosure filings roughly double.
- The fourth quarters of 2007 and 2006 saw tremendous spikes in foreclosure filings.** Figure 1 tracks quarterly changes in the number of properties on which foreclosures have been filed. It shows that in the past two years, there have been two quarters where foreclosure filings which spiked substantially. The first major spike was in the fourth quarter of 2006 where the number of properties with foreclosure filings jumped by over 26 percent from the third quarter to the fourth quarter of 2006 and by over 48 percent from the fourth quarter of 2005 to the fourth quarter of 2006. The number of properties with foreclosure filings jumped to even higher levels in the fourth quarter of 2007 where there were increases of over 70 percent from the third quarter to the fourth quarter of 2007 and of over 52 percent from the fourth quarter of 2006 to the fourth quarter of 2007.

Figure 1. Chicago Six County Area Change in Properties with Foreclosure Starts by Quarter, 2003 and 2007

Source: Foreclosure Report of Chicago

- Mortgages that went into foreclosure in 2007 were predominantly from loans originated since 2005.** Figure 2 shows that over 35 percent of 2007 foreclosure filings were of mortgages originated in 2006. Nearly 28 percent of foreclosure filings were of mortgages originated in 2005. Perhaps most surprisingly, roughly 4.5 percent of 2007 foreclosed mortgages originated in 2007.

Figure 2. Year of Mortgage Origination for Chicago Area Foreclosure Filings, 2007

Source: Foreclosure Report of Chicago

- South Suburban Cook County and the City of Chicago continue to have the highest levels of foreclosure.** South Suburban Cook County, the City of Chicago, Will County, and West Suburban Cook County had the highest levels of 2007 foreclosure filings per mortgageable property in the region.² Figure 3 shows that South Suburban Cook had over 36 foreclosure filings per 1,000 mortgageable properties, a number over double the regional average of 16.8 filings per 1,000 mortgageable properties. The City of Chicago had 24.4 foreclosures per 1,000 mortgageable properties, while Will County and West Suburban Cook County were just below the regional average at 16.6 filings per 1,000 mortgageable properties.
- Every region of the Chicago Six County area had communities with very high foreclosure levels.** As illustrated by Figure 4 (page 5), there was substantial variation in foreclosure levels per 1,000 properties within almost all counties in the region. With the exception of South Suburban Cook County which had universally high levels of foreclosures, all regions had areas with high and low levels of properties with foreclosure filings in 2007. Areas with the highest levels of properties with 2007 foreclosure filings in each region include:

²The number of 2007 mortgageable properties for each census tract was estimated by multiplying an estimate of the number of 2000 mortgageable properties from the U.S. Census by the change in owner occupied housing units between 2000 and 2007. Data on the number of 2000 owner-occupied housing units are from the U.S. Census. Estimates for the number of 2007 owner-occupied housing units are from eolytics. Geolytics is a data vendor specializing in demographic and geographic data for market research.

Figure 3. Chicago Six County Area Foreclosure Filings Per 1,000 Mortgageable Properties, 2007

Source: Foreclosure Report of Chicago

- **Chicago** – Entire South and West Sides of the city have high foreclosure levels. The community areas with the highest levels of foreclosures per 1,000 mortgageable properties include: Washington Park, Grand Boulevard, Woodlawn, West Garfield Park, and Englewood.
- **North Cook** – Parts of Evanston
- **Northwest Cook** – Parts of Hanover Park and Palatine
- **West Cook** – Parts of Cicero, Bellwood, Berwyn, Maywood, and Melrose Park
- **Southwest Cook** – Parts of Blue Island, Midlothian, and Robbins
- **South Cook** – Entire region
- **DuPage County** – Parts of Addison, Carol Stream, Glendale Heights, and Lombard
- **Kane County** – Parts of Aurora, Carpentersville, and Elgin
- **Lake County** – Parts of Fox Lake, North Chicago, Round Lake, Round Lake Beach, Waukegan, and Zion
- **McHenry County** – Parts of Huntly, Lake in the Hills, and McHenry
- **Will County** – Parts of Bolingbrook, Joliet, Plainfield, Romeoville, and University Park

See Appendices for information on the number of properties with foreclosure filings for City of Chicago community areas and municipalities in the region.

- **Chicago area foreclosures remain largely concentrated in highly minority communities.** Figure 5 (page 6) show that census tracts that are 80 percent or greater minority had foreclosure levels 2.5 times greater than the Six County region in 2007. These tracts had 41.6 foreclosure filings per 1,000 mortgageable properties. By comparison, census tracts that are less than 10 percent minority had 8 foreclosure filings per 1,000 mortgageable properties and the entire region have 16.8 per 1,000 mortgageable properties.

**Figure 4. Foreclosures per 1,000 Mortgageable Properties
Chicago Six County Area, 2007***

Figure 5. Chicago Six County Area Foreclosure Filings per 1,000 Mortgageable Properties by Minority Level of Census Tract, 2007

- Foreclosure filings are disproportionately located in minority communities.** Figure 6 shows that foreclosure filings in census tracts greater than 80 percent minority accounted for 34.5 percent of all filings in the Chicago Six County region in 2007. These communities account for less than 14 percent of all 2007 estimated mortgageable properties. By comparison, properties with foreclosure filings in census tracts that were less than 10 percent minority accounted for 11 percent of regional total, but these communities accounted for nearly 23 percent of regional mortgageable properties.

Figure 6. Distribution of Chicago Six County Area Foreclosure Filings and Estimated Mortgageable Properties by Minority Level of Census Tract, 2007

Conclusion

There are concerns that foreclosures will continue to grow in 2008. Risky adjustable rate mortgages that allowed 100 percent financing and limited or no income documentation were widely available through mid-2007. Many of these mortgages were structured to keep initial monthly payments artificially low, but have points two, three, or five years after origination where monthly payments can increase by hundreds of dollars, often to unaffordable levels. Many of these mortgages, particularly those originated by subprime lenders, were unaffordable to begin with. As regional property values stagnate or decline; refinance options remain limited for homeowners with adjustable rate mortgages; and the monthly mortgage payments on these loans reset to higher levels, foreclosure rates are likely to remain high.

While the Chicago region has not experienced the extreme growth in foreclosures seen in places such as California, Nevada, Michigan, and Florida, the growing number of properties with foreclosure filings still pose a significant problem for the region, particularly in communities and municipalities where they are highly concentrated. Foreclosures not only affect individual home owners and financial institutions, but also impact neighborhoods and cities. Research has shown that increased levels of foreclosure have the potential to cause declines in neighborhood property values and increases in neighborhood crime while putting an increased strain on municipal services and decreasing city revenues. Some cities have begun to combat the blight associated with foreclosure by fining lenders who fail to properly maintain properties in their possession.³ Concentrated foreclosures may also have a negative effect on city revenues and in places where property taxes make up a substantial portion of municipal revenues. Declining revenues can place an increased strain on the provision of necessary municipal services such as police and fire prevention. It is critical that local, state, and federal governments develop aggressive interventions to keep families in homes and stabilize neighborhoods.
