Sustainable building design can contribute to long-term affordability. Understanding the costs, trade offs, and design considerations in using sustainable building materials and methods is the first step in improving the way we design and build affordable housing in the public and private sector.

The purpose of the conference is to introduce strategies for designing affordable, efficient, cost effective, and sustainable multifamily housing to developers, architects and contractors. This conference will directly address how the construction of efficient building envelopes, structures, and systems can promote sustainability, contribute to affordability, minimize construction time, and promote long-term energy savings, thus expanding the definition of affordable beyond the first costs of construction to include the life cycle cost of the facility

Cost: \$75/ 3 days

Date: December 5th-7th, 2005
Location: 3rd floor Conference Room
77 West Jackson, Chicago IL
To Register: 312.996.6904 or website
